Fund Objective	To outperform the AusBond Bank Bill Index over a three-year period
Buy/sell spread³	+0.25% / -0.25%
Strategy FUM	\$30.2 M
Distribution Frequency	Monthly

Fund Features	
Attractive income:	The Fund aims to provide a stable income stream for investors by seeking to offer monthly distributions.
Focus on downside protection: ⁴	Ares believes protecting principal is key to superior performance and therefore places emphasis on dampening volatility and minimising defaults.
Dynamic asset allocation:	The Fund has the ability to dynamically allocate capital based on the best relative value opportunities across industries, issuers and regions within the credit spectrum.
Diversification: ⁵	The Fund provides access to investment opportunities and asset classes which are generally unavailable to individual investors.
Leading global investment team:	The Fund offers access to a leading global investment team with 20+ years of experience investing in global credit markets. The experienced management team applies an integrated and collaborative approach using the scale and power of the platform seeking to deliver compelling risk-adjusted returns through market cycles.

Asset Class Allocation⁶

Key Attributes	Fund	Change from 31 Mar 2022
Number of issuers	209	+21
Weighted Average Spread (L+)	351	-5
Current Yield (Fx Adjusted to AUD)	3.93%	+0.29%
Yield to Worst (Fx Adjusted to AUD)	6.15%	+0.67%
Weighted Average Credit Quality (S&P)	BB-	-
Total Investment Grade Exposure	52.25%	+0.48%

³ Source: Ares. During normal market conditions, bid/ask spreads have averaged 25 -100bps, however, during periods of volatility, we have observed spreads widen out to 300-400bps.

⁴ References to "downside protection" or similar language are not guarantees against loss of investment capital or value.

⁵ Diversification does not assure profit or protect against market loss.

⁶ The Fund's allocation is based on recent market conditions and is subject to change based on future market conditions at the time of investment and may differ materially from that set forth herein.

⁷ Credit Suisse Industry Distribution. Excludes collateralised loan obligations and cash (29.4% and 5.5% portfolio market value as of 30 April 2022, respectively).

Market Commentary

Volatility within credit markets increased during April as expectations for aggressive monetary tightening amid elevated inflation, slowing global growth and geopolitical turmoil weighed on investor sentiment. The U.S. high yield bond market generated its third largest monthly loss on record amid growth fears and a rates driven sell-off, returning -3.64%¹ in April. U.S. high yield primary market activity moderated in April amid volatility in yields, with 16 bonds pricing for \$10.9 billion over the course of the month. Meanwhile, U.S. high yield funds reported outflows of \$4.8 billion in April, following \$6.7 billion and \$9.6 billion of outflows in March and February, respectively.²

U.S. leveraged loans continued to outperform fixed-rate assets in April, returning 0.17%³ during the month. Amid heightened volatility across the broader markets, loan primary market activity slowed in April, with \$26.9 billion in loans pricing over the course of the month. Demand for loans remained robust with \$4.5 billion of retail inflows against the backdrop of rising interest rates.²

U.S. CLO debt securities posted flat returns for the month with ratings tranches generating mixed results.⁴ In April, primary CLO market activity slowed as managers opted to postpone deals amid a challenging pricing environment due to on-going macro volatility and liability spread widening.

Similar to its fixed rate peers, U.S. investment grade bonds underperformed floating-rate assets, returning -3.79%⁵ during the month amid volatility in yields and tighter monetary conditions.

In Europe, high yield bonds returned -2.79%⁶ as hawkish signals from the European Central Bank and record high inflation prints in Europe negatively impacted performance. Meanwhile, the European loan market returned -0.13%⁷ in April as slowing demand and muted European CLO formation weighed on performance.

Market Outlook

Credit markets continue to be under pressure in May alongside heightened volatility in stocks and rates. Central banks face substantial challenges as they look to combat inflation with aggressive monetary tightening, but without tipping the economy into a recession. Meanwhile, the ongoing war in Ukraine, newly implemented COVID-related lockdown measures in China, raw material shortages and persistent supply-chain disruptions continue to weigh on investor sentiment. Against this backdrop, global growth slowed during the first quarter and GDP expectations have moderated to pre-COVID averages. Despite these headwinds, we believe the fundamental picture remains sound amid strong corporate and household balance sheets, an improving labor market and stable Q1 2022 earnings. Specifically, pricing power and strong underlying demand have allowed companies in a range of sectors to mitigate inflationary pressures, so while default rates have increased slightly, they remain well below historical averages.

Although there is significant uncertainty about the future of the economy and the global landscape, we believe our cycle-tested, bottom-up credit approach will enable us to both preserve investor capital and seek out attractive alpha-generating opportunities.

Fund Commentary

The Ares Global Credit Income Fund (“AGCIF” or the “Fund”) returned -0.27% gross and -0.33% net for the month of April. The portfolio’s allocation to high yield bonds weighed on performance with most ratings cohorts experiencing mark-to-market losses. With that said, the portfolio’s bank loan and CLO debt allocations posted modest gains in April. The Fund benefited from its focus on the more senior, high quality segments of the credit market, as higher-rated names within the portfolio’s bank loan allocation drove outperformance relative to the broader loan index amid the risk-off environment.

During the month, we continued to proactively manage exposures across the portfolio to identify opportunities created by shifts in sentiment on rates, growth expectations, and idiosyncratic credit news. Within corporate credit, we are maintaining our core positions in sectors with favorable supply-demand dynamics and earnings trajectories, such as technology, and certain segments of housing and healthcare, while reducing exposure to cyclical sectors lacking clear bottom-up catalysts. We continue to reduce credit risk and from a fixed versus floating perspective, remain overweight floating rate assets amid rising interest rate risk and persistent inflation. Within the Fund’s structured credit allocation, we continue to take advantage of the yield premium in CLO debt relative to corporate credit and continue to favor transactions with high quality underlying portfolios and ample time remaining in their reinvestment periods. Further, we are selectively adding Single-A CLO debt securities in an effort to further increase the credit quality of the portfolio overall.

Looking forward, we continue to trim credit risk while remaining underweight duration against an expected backdrop of slowing economic growth and higher interest rates in the months ahead. We believe credit spreads are currently at levels that represent attractive entry points, but tail risks have increased and we anticipate elevated credit dispersion as well as rising idiosyncratic credit events, driven by a host of conflicting themes. Against this backdrop, we believe credit selection and active portfolio management will continue to be paramount in 2022 and view the Fund to be well-positioned to deliver attractive returns due to our disciplined investment process rooted in fundamental credit selection, relative value analysis, and rigorous risk management.

Views expressed are those of the Ares Global Credit Income Fund Portfolio Managers as of 30 April 2022 are subject to change at any time, and may differ from the views of other portfolio managers or of Ares Australia Management as a whole.

The outbreak of a novel and highly contagious form of coronavirus ("COVID-19"), which the World Health Organization has declared to constitute a pandemic, has resulted in numerous deaths, adversely impacted global commercial activity and contributed to significant volatility in certain equity and debt markets. The global impact of the outbreak is rapidly evolving, and many countries have reacted by instituting quarantines, prohibitions on travel and the closure of offices, businesses, schools, retail stores and other public venues. Businesses are also implementing similar precautionary measures. Such measures, as well as the general uncertainty surrounding the dangers and impact of COVID-19, are creating significant disruption in supply chains and economic activity and are having a particularly adverse impact on energy, transportation, hospitality, tourism, entertainment and other industries. The impact of COVID-19 has led to significant volatility and declines in the global financial markets and oil prices and it is uncertain how long this volatility will continue. As COVID-19 continues to spread, the potential impacts, including a global, regional or other economic recession, are increasingly uncertain and difficult to assess. Any public health emergency, including any outbreak of COVID-19 or other existing or new epidemic diseases, or the threat thereof, and the resulting financial and economic market uncertainty could have a significant adverse impact on the Fund, the value of its investments and its portfolio companies. The performance investment information herein is as of 30 April 2022 and not all of the effects, directly or indirectly, resulting from COVID-19 and/or the current market environment may be reflected herein. The full impact of COVID-19 and its ultimate potential effects on portfolio company performance and valuations is particularly uncertain and difficult to predict.

Index Definition & Disclosure:

The Bloomberg AusBond Bank Bill Index is engineered to measure the Australian money market by representing a passively managed short term money market portfolio. This index is comprised of 13 synthetic instruments defined by rates interpolated from the RBA 24-hour cash rate, 1M BBSW, and 3M BBSW.

Indices are provided for illustrative purposes only and not indicative of any investment. They have not been selected to represent appropriate benchmarks or targets for the strategy. Rather, the indices shown are provided solely to illustrate the performance of well known and widely recognized indices. Any comparisons herein of the investment performance of a strategy to an index are qualified as follows: (i) the volatility of such index will likely be materially different from that of the strategy; (ii) such index will, in many cases, employ different investment guidelines and criteria than the strategy and, therefore, holdings in such strategy will differ significantly from holdings of the securities that comprise such index and such strategy may invest in different asset classes altogether from the illustrative index, which may materially impact the performance of the strategy relative to the index; and (iii) the performance of such index is disclosed solely to allow for comparison on the referenced strategy's performance to that of a well known index. Comparisons to indices have limitations because indices have risk profiles, volatility, asset composition and other material characteristics that will differ from the strategy. The indices do not reflect the deduction of fees or expenses. You cannot invest directly in an index. No representation is being made as to the risk profile of any benchmark or index relative to the risk profile of the strategy presented herein. There can be no assurance that the future performance of any specific investment, investment strategy, or product will be profitable, equal any corresponding indicated historical performance, or be suitable for a portfolio.
